

OPENWAVE STRENGTHENS LOCATION OFFERING THROUGH WORLDWIDE RESELLER AGREEMENT WITH TECHNOCOM CORPORATION

Agreement Allows Openwave to Offer its Operator Customers Quality Assurance for their Wireless Location Systems

LOS ANGELES, CTIA IT & Entertainment – September 12, 2006 – Openwave Systems Inc. (Nasdaq: OPWV), the leading independent provider of software solutions for the communications and media industries, today announced a worldwide strategic reseller agreement with TechnoCom Corporation, a leading provider of solutions to enable wireless location services and assure their ongoing performance. This agreement allows Openwave to resell TechnoCom's LocationAssurance Manager™ (LAM) platform and enable ongoing quality assurance of its wireless location systems.

TechnoCom's LAM platform will add location service assurance to Openwave's portfolio of location offerings, allowing operators to easily measure, report and analyze the quality of their location networks. These features are key to the performance of both emergency location services as well as revenue generating commercial location-based services.

"Mobile operators are in need of location solutions that offer the highest levels of reliability and availability, and they require a level of control built into their solution so critical adjustments can be made quickly," said John Trobough, vice president of product management, Openwave. "Our agreement with TechnoCom allows us to offer our wireless customers a solution that features rapid visibility into service quality and allows them to proactively improve performance to meet their desired levels of service."

"Openwave has a proven record of deploying highly successful location-based solutions within operators' networks worldwide," says Masoud Motamedi, TechnoCom president. "Our LAM platform extends Openwave's value by assuring insight into the performance of location networks, improving the overall subscriber experience and advancing data revenue for new service offerings."

Openwave is a leading provider of high accuracy location solutions for emergency, consumer and commercial location services. Openwave processes more than 100 million location transactions per month through its location technology and middleware. Openwave's location solutions are currently deployed by leading operators in North America, EMEA and Asia-Pacific.

Openwave's messaging, location, browsing and content services span all networks and devices. Today, Openwave software is used by more than 100 mobile operators, broadband providers and Mobile Virtual Network Operators (MVNOs) to enable access to data services for more than 500 million consumers around the world.

About Openwave
